

Redhat Linux Training & Certification Course Content

☑ Basic Linux Fundamentals Related Topics & ☑ Linux Administration Related Topics

Redhat Officials - RHCSA - Course Content - First Book (RH124) ==> Total 16 Chapters are available in First Book
- Second Book (RH134) ==> Total 11 Chapters are available in Second Book

Live Classes

Unit-1	Discussion About Basic Terms & About Linux and Unix and Windows Operating system before start Linux Training
Unit-2	OS Installation Planning & Redhat Linux Installation - LAB Creation Steps
Unit-3	Discussion About Short keys and Command Syntax Rules Understanding -help and man command examples
Unit-4	Data Managing Concept in Windows and Linux OS
Unit-5	Examples of pwd-ls-cd-touch-mkdir-tree-Commands
Unit-6	File Management & Creation Command using gedit-VI-VIM
Unit-7	Examples of cp-rm-mv-rename-rsync-inodes
Unit-8	Examples of echo-cat-tac-wc-tee-and usages of symbols ; > >> in Linux Command line
Unit-9	Examples of head-tail-basic-sed-commands and Basic cut and awk Examples
Unit-10	Examples of grep-egrep-fgrep-uniq-commands
Unit-11	Examples of aliases-bashrc-motd-issue-Types of Quotes
Unit-12	Examples of FIND-Locate-STDIN-STDOUT-STDERR Operator in Linux Command line
Unit-13	Examples of Link-Soft-hard-Link and Data Compression Examples using tar-gzip-bzip2-xz Commands
Unit-14	Device Mounting-Unmounting Concept and USB Access Steps in Linux with Command line
Unit-15	File Hierarchy Structure and Examples date-cal-timedatectl-NTP Client Configuration

Unit-16	RPM Package Management with rpm Command & with yum OR dnf
Unit-17	Advance Practise with YUM for application installation - online redhat repository and EPEL Repo concept in Linux
Unit-18	Managing Services and Daemons using systemctl Command & init & systemd Concept
Unit-19	Run level, Targets, Single User Mode, GRUB Password Configuration
Unit-20	Job Scheduling with at and crontab Utility
Unit-21	Basic Bash Shell Scripting Concept
Unit-22	User & Group Management, Password Policy Configuration, SUDO Configuration
Unit-23	File & Directory Permissions Management-chmod-chown-chgrp-umask-setfacl-getfacl-SUID-SGID-STICKY-BIT-Chattr-Isattr Examples
Unit-24	Standard Partition Creation Concept During the OS installation and using Command Line
Unit-25	SWAP Partition Creation Steps - using Partition and File based method
Unit-26	Logical Volume Management (LVM) Configuration and LVM based Operation with Examples and BASIC RAID Configuration Concept
Unit-27	Linux Booting Process and OS Troubleshooting Steps using Rescue kernel -Rescue Mode-Single Usermode-Maintenance Mode-Examples
Unit-28	Network Theory Session - about IP addressing and Basic Network Devices
Unit-29	Network Configuration Command with Examples - nmcli-nmtui-hostnamectl-scp-rsync-netstat-ip-route-dns-dhcp-concept
Unit-30	SSH Server-Client Configuration - Password Less Access Authentication -Keypair Creation
Unit-31	Network Security Management using firewallld and iptables and TCP-wrappers ==> Theory & Practical Configuration
Unit-32	Enhanced Security with SE-Linux and Role of SELINUX and FIREWALLD in any linux machine
Unit-33	Explain about Cockpit Tool, SOS Report Creation Step, Redhat Login ID Creation & Usages of Red Hat Insights -redhat Support Case open
Unit-34	Performance Optimization with Tuned Daemon Profiles & kernel Parameters
Unit-35	Process Management in Linux ==> ps-top-kill-bg-fg-jobs-nice-renice examples
Unit-36	Configure Virtual Machine using KVM [Kernel based Virtual Machine] Concept
Unit-37	NFS File Sharing Server and NFS Client Configuration and with AutoFS Mounting Concept
Unit-38	Kickstart and Network-Based Installation Server Configuration
Unit-39	Basic Container Concept
Unit-40	Log Management & Troubleshooting Understanding about any services

SELF Learning [Expected Server and Client Configuration Knowledge in Linux admin profiles related interviews]

♦ Server and Client Configuration in Red Hat Linux

- 1- YUM Configuration
- 2- NFS Server and Client Configuration
- 3- SAMBA Server and Client Configuration
- 4- FTP server and Client Configuration
- 5- DNS Server and Client Configuration
- 6- DHCP Server and Client Configuration
- 7- Apache Web Server Client Configuration
- 8- SSH Server and Client Configuration
- 9- MariaDB Database Server and Client Configuration
- 10- NTP Server and Client Configuration
- 11- PXE Boot and Kickstart Server Configuration
- 12- POSTFIX Email Server Configuration

SELF Learning [Expected Monitoring Tools in Linux admin profiles related interviews]

◊ Monitoring & Observability Tools

- 1- Nagios – Monitoring Tool Installation
 - 2- Zabbix – Monitoring Tool Installation
 - 3- Kibana – Monitoring Tool Installation
 - 4- Grafana – Monitoring Tool Installation
 - 5- Prometheus – Monitoring Tool Installation
-
